TAKE A DREAM . . . AND MAKE IT REALITY

Supplied in any
stage from
KIT SET
to
TURN-KEY

**Hand Built
Excitement**

*The Cars Built
By ALMAC*

This replica is based on the original A.C. Cobra and several original items are employed in the construction of this hand built car. We are striving to improve the vehicle all the time, and under these circumstances, details and specifications can change without notice at any time.

The buyer will find that it is an easy car to drive, with light responsive steering, firm but not hard suspension with very little body roll.

The body is constructed of quality fibreglass, moulded in one piece with floor, bulkheads, inner guards and boot floor bonded in whilst the shell is still in the mould. Steel beams are moulded into the body to support the doors, windscreen frame, and roll bar.

The chassis is a ladder type

frame made from 100 x 75mm RHS main rails.

All brackets are fitted to take all the components including engine and gearbox mounts to suit the customers choice.

Located in the boot is the battery, out of the way but easily accessible. Twin electric fans are used for engine cooling and are thermostatically controlled.

Full instrumentation is offered and includes Speedometer, Tachometer, water temperature gauge, oil pressure gauge and fuel gauge. Seats are upholstered in top quality leather and carpets are of marine quality waterproof nylon, as is the luggage boot. The seats are adjustable back and forth.

• **Engine:**

Any V8 engine and transmission can be used and there is ample room for large motors such as 460 Ford and 454 Chevrolet.

• **Suspension:**

Independent front with A arms and coil over shocks Independent rear with coil over shocks.

• **Brakes:**

Discs front and rear. Front discs are 11" diameter, ventilated with four piston alloy callipers. Rear discs are 10" diameter with two piston alloy callipers.
