
Sabre

The Sabre is built from a high quality kit comprising a very tough fibreglass body which is assembled on an extremely durable, long lasting chassis.

Anyone with a degree of practical ability, some common sense and a certain amount of patience, can build a Sabre. No specific engineering or mechanical skills are required.

Take a dream Make it reality

The Sabre features sensational styling and individuality.

Designed with the precision and care that has made ALMAC a byword for quality in the car kit industry, the Sabre combines a beautiful shape with affordable mechanical parts.

The standard 2 litre Cortina version gets you a great set of wheels at a price that's economical to build and maintain or you can go for the optimum power and performance with V6 or Rover V8 engines.

The choice is yours.

Comprehensive building instructions are supplied with each kit. By using the Ford Cortina Mk4 or 5 as a donor car, cost is kept to a minimum.

The kit is designed so that almost every part is available from the donor car, the only extras required are the trim, Corolla doors for windows, locks etc., soft top and painting. Also if required, a different engine & gearbox.
