

ALMAC TC SPORTS CAR

The TC Sports Car is styled on the traditional shape of the MG T Series, designed as an easy to build sports car which will give open air motoring at a low cost.

The body is of fibreglass construction moulded in one piece with floor and bulkheads bonded in whilst the outer shell is still in its mould.

Wooden frames are bonded in so that doors can be cut out if required.

The body fits on to a Triumph Herald chassis utilising engine, gearbox, prop shaft, front and rear suspensions, handbrake, instruments and wiring loom.

Or to our chassis frame designed for Viva suspensions and any 4 cyl. motor.

The basic kit comprises of:-

Complete body fitted with floor, bulkheads, bonnet with stainless steel centre hinge, radiator grille surround with stainless steel mesh headlight shells, windscreen and frame.

The body is moulded with a coloured gel coat finish which can be painted if desired.

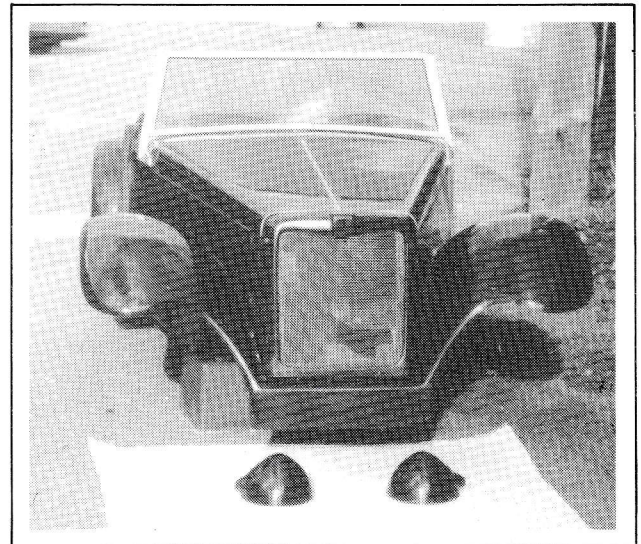

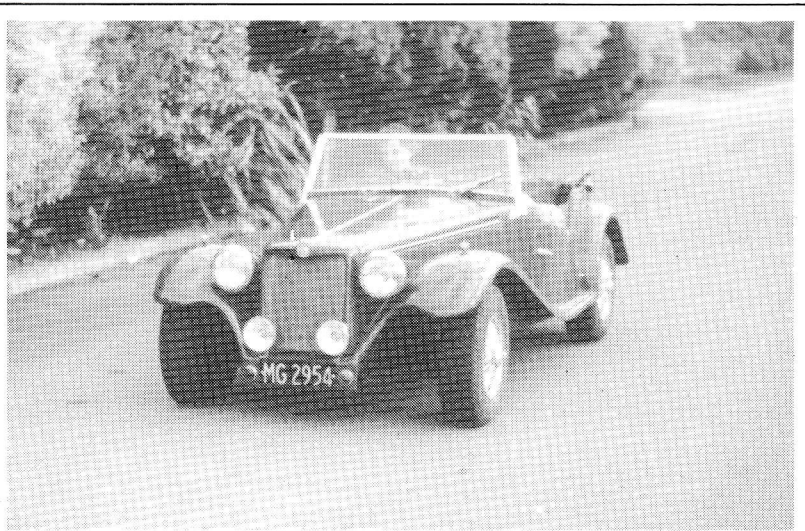

Gel colours are available in Red, British Racing Green, White, Cream and Light or Dark Blue.

The one piece body bolts straight onto the chassis eliminating worries about ill fitting and rattling individual panels, no glassfibre laminating or joining is required.

Soft top, hardtop and sidescreens are available to make an all weather, everyday practical sports car.

The Body Ready for Collection
